Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1			
2			
3			

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load		
2	Data Storage		
3	Performance		
4	Security		

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact

Phase 2			
Phase 3			
Phase 4			

Scalability and Future Plan

Formula 1 Race Intelligence Analysis Using Tableau

Dataset: F1 Racing Project Dataset(1).xlsx | Prepared 27 October 2026

Current limitations include workbook-based source refresh, sparse DNF reason data, no nationality field, and the need to verify race_id grain before event-level aggregation.

Scalability should prioritize reliable source refresh, reusable calculated fields, a documented data model and performance testing. Snowflake is an optional future platform, not a completed component unless deployed by the team.

Aspect	Current state	Proposed upgrade
Data volume	Excel workbook with five sheets	Automate refresh; consider database/warehouse if volume grows
Data quality	Validation is manual	Add repeatable null, key and type checks
Analysis	Tableau worksheets and dashboards	Create reusable KPI definitions and dashboard templates
Coverage	No nationality field; 2010–2026 represented	Add sourced nationality lookup and document provenance
Publication	Tableau Public link not yet provided	Publish after review and verify access
