Dashboard Design

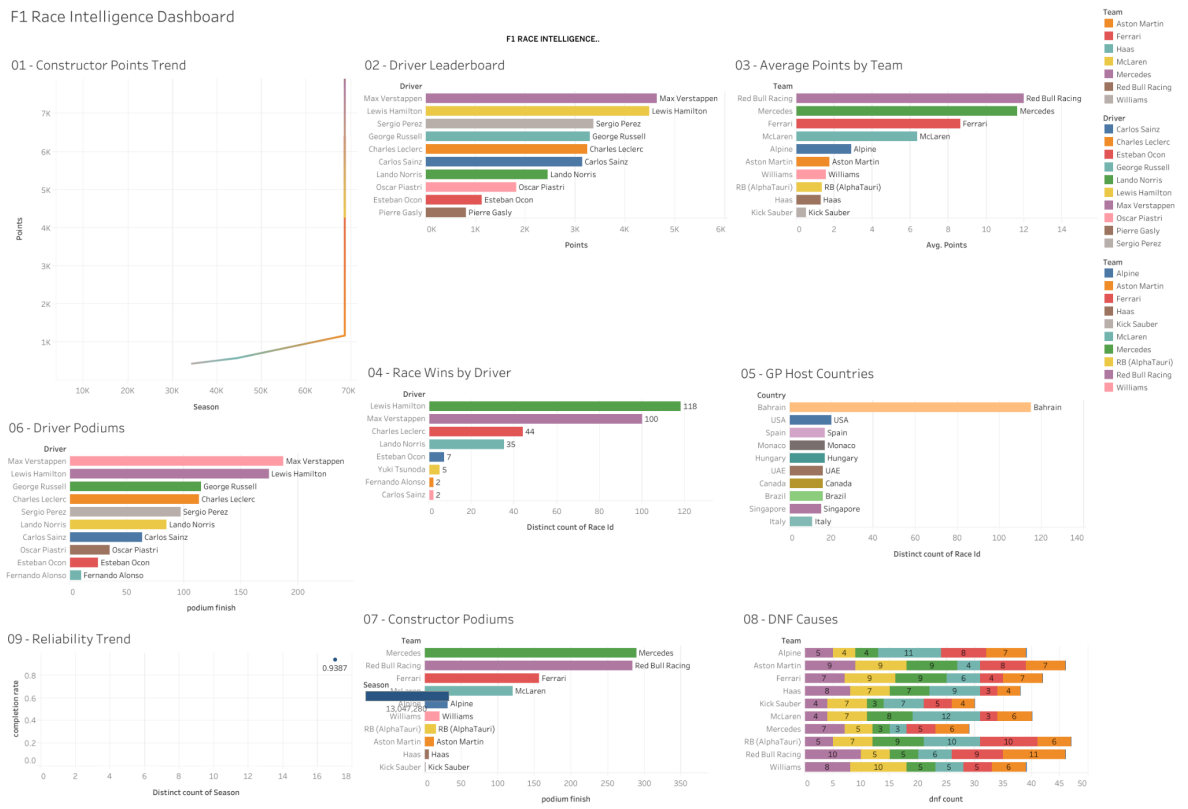

Date	24 September 2024
Team ID	PNT2022TMIDxxxxxx
Project Name	FORMULA 1 Race Intelligence Dashboard Analysis Report (2010-2026)
Maximum Marks	5 Marks

Creating an effective dashboard involves thoughtful design to ensure that the presented information is clear, relevant, and easily understandable for the intended audience. Here are some key principles and best practices for dashboard design

Activity 1: Interactive and visually appealing dashboards

Creating interactive and visually appealing dashboards involves a combination of thoughtful design, effective use of visual elements, and the incorporation of interactive features. Here are some tips to help you design dashboards that are both visually appealing and engaging for users so take care of below points

- Clear and Intuitive Layout
- Use Appropriate Visualizations
- Colour and Theming
- Interactive Filters and Slicers
- Drill-Down Capabilities
- Responsive Design
- Custom Visuals and Icons
- Use of Infographics

Note: Highlight the major outcomes in form of bullet points

Sample:

Here are five potential outcomes from the dashboard image provided:

- **Customer Count and Sales Overview**:The dashboard reports a total of 9,994 customers, with cumulative sales of 2.30M, a profit of 286.40K, and revenue of 11.49M. These figures highlight the overall scale and profitability of the store's operations.
- **Highest Sales**: Copiers and Machines are the top-selling products, with sales values of 2.199M and 1.646M, respectively. This suggests strong demand or high price points for these products.
- **Peak Month**: December has the highest monthly sales at 352.46K, likely due to holiday shopping.
- **Seasonal Sales Growth**:The monthly sales chart shows growth in specific months, such as March, September, October, and December, likely influenced by seasonal factors and sales events.
- **Sales Distribution Across Segments**: The **Consumer segment** leads with 0.41M in sales, followed by Corporate at 0.25M, and Home Office at the lowest

Activity 2

Publish Dashboard on Tableau Public and Paste the Dashboard Public link below:

Formula 1 Dashboard Design Specification

Dashboard title: Formula 1 Race Intelligence Analysis. Use a dark charcoal background, red accent, white text, and restrained team colours. Put global filters at the top and use consistent labels, units, tooltips and source notes.

Recommended layout: top KPI row (distinct races, drivers, teams, DNF records); left-side filters (season, team, driver, circuit type, wet race); main area for constructor trend and driver leaderboard; lower area for tyre and reliability views. KPI definitions must be documented and match the source grain.

Use only real results from the workbook. Do not retain the template's unrelated sales/IPL example observations. Tableau screenshots and published links should be added after implementation, not fabricated.

Worksheet	Chart type	Main fields	Purpose
Driver Points Leaderboard	Sorted horizontal bar	driver, SUM(points)	Rank drivers; filter by season.
Constructor Trajectory	Line chart	season, team, SUM(points)	Compare team points across seasons.
Tyre Compound Usage	Bar chart	tyre_compound, COUNT(lap_number)	Compare compounds in lap-level sample.
Tyre Age vs Lap Time	Scatter plot	tyre_age_laps, lap_time_s, tyre_compound	Explore lap-time pattern by tyre age.
Podium Distribution	Stacked bar	driver/team, finish_position	Compare 1st/2nd/3rd places.
DNF Reliability	Heatmap / stacked bar	team, season, dnf, dnf_reason	Inspect recorded retirement patterns.
Circuit & Weather	Bar / highlight table	circuit_type, is_wet_race, dnf	Compare observed DNF rates.
Race Control & Pit Stops	Scatter / bar	safety_car_laps, pit_stops, avg_pit_stop_time_s	Explore operational context.
