Ideation Phase
Brainstorm & Idea Prioritization Template

Date	31 January 2026
Team ID	
Project Name	FORMULA 1 Race Intelligence Dashboard Analysis Report (2010-2026)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Team member 1	Driver points leaderboard	Broadcast analytics	1
2	Team member 2	Constructor performance by season	Strategy analytics	1
3	Team member 3	Tyre compound and tyre-age analysis	Race strategy	1
4	Team member 4	DNF/reliability analysis by team and circuit	Technical analysis	1

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/ Lo w)	Importance (High/Medium/ Lo w)	Priority	Selected (Yes/No)
1	Interactive Formula 1 performance dashboard	High	High	1	Yes

2	Tyre strategy and lap-time analysis	High	High	2	Yes
3	Nationality talent-pool comparison	Low	Medium	3	No — nationality is absent from supplied workbook

Project-specific Documentation

Dataset workbook: F1 Racing Project Dataset(1).xlsx.

Sheets and data rows (excluding headers): race_results 6,464; circuits 29; championship_standings 311; lap_intelligence 3,814; qualifying_results 3,130.

Observed race_results coverage: seasons 2010–2026; 334 distinct race_id values; 19 distinct driver labels; 10 distinct team labels; 21 distinct country labels.

Available analysis fields include race date/season/round, circuit type and location, driver/team, finish/grid position, points, DNF and DNF reason, weather/wet-race flag, safety-car/VSC/red-flag data, pit stops, tyre strategy/starting compound, overtakes and laps led.

Lap-level fields include lap/sector times, tyre compound and tyre age, DRS, speed trap and pit-lap flag. Qualifying fields include qualifying position, Q1/Q2/Q3 times, gap to pole and top speed.

Validation note: workbook is a multi-sheet analytical dataset, not necessarily official complete historical timing. Verify values and data types before presenting findings. Do not infer driver nationality: no nationality field is present.

Use COUNTD([race_id]) for race-event counts where appropriate; race_results contains multiple driver-result rows per event. Distinguish race-result row counts from unique Grand Prix counts.

• Recommended analysis: driver points; constructor season trajectory; tyre compound usage; tyre age versus lap time; podium distribution; country/circuit comparisons; DNF by team/season/reason; wet-race/circuit-type reliability; grid-to-finish position gain; pit-stop and safety-car context.

• Limitations: no driver nationality field; DNF reasons are sparse; dataset's historical coverage and synthetic-looking labels should be validated against an authoritative source before external claims.
