Ideation Phase
Define the Problem Statements

Date	31 January 2026
Team ID	
Project Name	FORMULA 1 Race Intelligence Dashboard Analysis Report (2010-2026)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel

PS-1	Team strategist / analyst	Compare constructor and driver performance across seasons	Metrics are spread across multiple sheets and years	Manual comparisons are slow and easy to misinterpret	Uncertain about trends and strategic opportunities
PS-2	Broadcast / technical analyst	Explain podiums, tyre patterns and DNF trends clearly	No single interactive view connects results, circuits and lap data	Different tables use different levels of detail	Need a concise, evidence-based race narrative

Project-specific Documentation

Dataset workbook: F1 Racing Project Dataset(1).xlsx.

Sheets and data rows (excluding headers): race_results 6,464; circuits 29; championship_standings 311; lap_intelligence 3,814; qualifying_results 3,130.

Observed race_results coverage: seasons 2010–2026; 334 distinct race_id values; 19 distinct driver labels; 10 distinct team labels; 21 distinct country labels.

Available analysis fields include race date/season/round, circuit type and location, driver/team, finish/grid position, points, DNF and DNF reason, weather/wet-race flag, safety-car/VSC/red-flag data, pit stops, tyre strategy/starting compound, overtakes and laps led.

Lap-level fields include lap/sector times, tyre compound and tyre age, DRS, speed trap and pit-lap flag. Qualifying fields include qualifying position, Q1/Q2/Q3 times, gap to pole and top speed.

Validation note: workbook is a multi-sheet analytical dataset, not necessarily official complete historical timing. Verify values and data types before presenting findings. Do not infer driver nationality: no nationality field is present.

Use COUNTD([race_id]) for race-event counts where appropriate; race_results contains multiple driver-result rows per event. Distinguish race-result row counts from unique Grand Prix counts.

• Recommended analysis: driver points; constructor season trajectory; tyre compound usage; tyre age versus lap time; podium distribution; country/circuit comparisons; DNF by team/season/reason; wet-race/circuit-type reliability; grid-to-finish position gain; pit-stop and safety-car context.

• Limitations: no driver nationality field; DNF reasons are sparse; dataset's historical coverage and synthetic-looking labels should be validated against an authoritative source before external claims.
